## ABSTRACT

This paper uses the investigating materials on traffic accidents to define the reasons in Mongolia. The defect in road design has had the close relations with influence of route line, subgrade, pavement and structures. The human and vehicles are two very important factors for the traffic accidents. Traffic accidents are related to the application of reasonable theory and practice. Authors collected the influence factors by season and traffic amount on the safety, such as winter and heavy overloading. The analysis results and recommended methods to avoid traffic accidents are given.
